

# Interwoven® Business Productivity Suite

## Overview

It's no surprise that usability has become a key criteria of enterprise software decisions. Businesses recognize they need to make it easy for employees from all corners of the organization to use and access their ECM system in order to realize the true value of their investment. As a leading global enterprise content management (ECM) provider, we have built our Interwoven® 5 Platform to overcome barriers that typically prevent employees from accessing and using their content management system. Seamlessly integrated into existing applications such as Word, Interwoven ECM allows users to participate in the content management process using tools and interfaces they are familiar with.

## Enter the Business Productivity Suite

Included in the ECM platform is the Business Productivity Suite—a rich set of user tools designed with the business contributor in mind. Individually and together, these tools provide simple ways for business users to contribute, review, edit, mark up, and approve business content. The Business Productivity Suite is comprised of:

- TeamSite® Front-Office
- TeamSite Templating
- Actionable Email
- VisualAnnotate™
- VisualPublish

Key features	What it does
<b>VisualAnnotate™</b>	Allows users to quickly review and edit content directly on a Web page in real time. The annotations which capture the annotation history appear as transparent "sticky notes" that are stored in a secure and controlled environment. Also includes a pen for creating free-form shapes.
<b>VisualPublish</b>	Enables users to browse and review Web content in the context of the site. Features a floating tool bar that allows users to directly check links, edit, assign changes, or submit modifications, bringing key ECM functionality directly to the reviewer's fingertips.
<b>TeamSite® Front-Office</b>	Enables contributors to apply content management services to any file without leaving their favorite desktop application, thereby enhancing, not replacing, existing productivity tools. The Interwoven® Briefcase takes this one step further by allowing users to use Microsoft® Explorer functionality to manage TeamSite content.
<b>TeamSite Templating</b>	Provides a simple user interface that makes it easy for business users to manage form-based XML data. Includes powerful form navigation, Microsoft Word®-style formatting, spell check, table support, cut-and-paste, and more.
<b>Actionable Email</b>	Offers actionable, one-click access to all basic tasks of ECM, such as document review, editing, and even metadata entry. Users can simply click Approve, Reject, View or Edit to move the content through its approval process directly from their email client.

TeamSite Front-Office enables business users to access content management services from desktop applications such as Microsoft Word.

VisualAnnotate makes content reviews fun and easy.

## System requirements
